

COMPANY PROFILE

The Cerebellum Group provides a single point of contact and competence for organizations to realize their technology and communications vision. Our compact team of professionals has a mission to more quickly understand business requirements, develop implementation plans, assemble and direct resources . . . and execute. Through close relationships with a wide network of industry leaders and problem solvers, we're positioned to help companies meet virtually any requirement for technology development, innovation, security and business growth.

Core Business Focus

■ **Network and Data Security –**

Our 360-degree review of a network's security posture identifies the weak links that could compromise an otherwise robust defense against internal and external threats.

Key elements of our practice include:

- Risk Assessment
- PCI Gap Analysis
- Security Architecture Review
- Firewall Review
- Router/Access Control List Management
- Network Segmentation
- Penetration Testing
- Incident Management
- Security Training
- Data Redaction

Wireless Assessment

■ **System Conversions** – mergers, acquisitions, or changes to key technology partnerships often drive new requirements to migrate system, network, and even third-party connections and relationships from one place to another. We provide in-house expertise as well as support from experienced partners – system architects, integrators, trainers, and project and client relationship managers – to rapidly assess, plan, manage, and execute complex platform conversions.

■ **Core Processor Integrations** – it's your data – make the most of it. When your initiatives call for adding greater functionality and utility to augment the capabilities of your core data processing platform, we create the value-added interfaces that enable disparate systems to more easily and seamlessly communicate with one another. Our ability to implement customized programs on your existing platform is a cost-effective approach to getting the most from one of your most significant technology investments.

■ **Digital Messaging** – our Medulla Marketing and Communications division supports the CyKlops Advertising Network,

which leverages digital signage technology to

help companies more effectively promote their products and services. Medulla designs messaging campaigns and develops content that complements our clients' marketing strategies and objectives.

COMPANY PROFILE

Key Partnerships

- **Cyber Operations, Inc.** - Cyber Operations has developed a comprehensive family of integrated security technology tools for numerous governmental and commercial entities.

The company and its affiliates include several collaborative divisions focusing on next-generation advances to critical communication infrastructures and security. Through Cyber Operations' integrated solutions, government, commercial enterprises, and financial institutions can affordably enhance the efficiency, effectiveness, and security of managing, transmitting and delivering information.

- **TechRim IT** - TechRim designs and develops distributed enterprise systems. Their consulting and software development services provide full support at every project stage from architecture through implementation. TechRim IT integrates new technologies, design innovation and process efficiencies that deliver results. TechRim IT has extensive experience developing and deploying solutions using ASP.net, Java, web services, and other widely used technology.

- **Ongoing Operations** - OGO provides a complete suite of business continuity planning and disaster recovery solutions for the credit union industry. Their services include plan development, risk assessment, data replication, workspace accommodations, data center hosting and back-up, system and network connectivity, equipment co-location, and mobile branches.

- **BBHW Media Group** - BBHW brings experience in software engineering/development, network communication, media content development, advertising and sponsorship sales, marketing system integration, installation, support, accounting and operation management. Their primary focus is to assist clients with designing, deploying and managing a digital signage solution that meets their objectives for building brand awareness, increasing sales and launching new products.

- **Mag-Lev Energy** - Mag-Lev is a Hewlett-Packard preferred non-stop integrator and solution provider with a proven track record in the financial, government, and telecommunications sectors. Their solutions focus on ATM/POS and wire transfer payments; enterprise integration; Master Data Management (MDM); open messaging; and security and encryption.
